

Remote Cardiac Telemetry at the Heart of a Virtual Care World.

Our vision is to deliver **one virtual telemetry platform** that will meet all of your remote cardiac monitoring needs.

Virtual cardiology is the future.

Is your virtual telemetry strategy ready?

1 in 2 clinical leaders

say the pandemic led to shifts in their virtual health strategy.¹

60% of clinical leaders

identify the need to make additional investments in virtual health.²

80% of providers

feel that virtual care improves their ability to care for patients.³

83% of patients

expect to continue using tele-health post COVID-19.4

Cardiac telemetry has entered the virtual care world. Once again, we're at the helm.

When InfoBionic was founded more than a decade ago, we reimagined accepted norms for cardiac arrhythmia detection with a full disclosure model rooted in exceptional quality and innovation. This model represented some of the earliest applications of virtual care technology.

Today, virtual care is finding its permanent place in the care landscape. As providers do more and more in the virtual setting, they require a flexible and scalable approach to cardiac telemetry that enables them to provide first-class care at any level of acuity, anywhere virtual care is delivered. We have a bold vision for the MoMe[™] ARC Platform, the first platform on the market that will be able to deliver the acuity, agility, and adaptability needed to step confidently into virtual cardiac care.

We are InfoBionic.

These are the things that make us who we are.

The best quality data, delivered in the best way.

The cardiac community recognizes InfoBionic as the gold standard for trusted, high-integrity arrhythmia detection data, which are delivered through an intuitive, HIPAA-compliant portal.

Reimagining models, empowering clinicians.

From day one, we have committed ourselves to providing full disclosure and control to clinicians, enabling them to care with greater agility and tailor the platform to best suit patient needs.

Continual innovation to keep you ahead.

Supported by our experienced and mission-minded team, we continue to develop and deliver offerings that are truly first in class and fully aligned with evolving patient and clinician needs.

"Cardiac care has been embracing virtual models for years in the form of remote arrhythmia detection and monitoring. Today, these models have taken on new significance as they play a broader role in cardiology and across disciplines. At InfoBionic, we have always innovated a beat ahead. We are proud to continue our legacy of innovation through yet another wave of change."

Stuart Long,
 Chief Executive Officer

Virtual telemetry with no limits.

It's a beautiful thing.

From high-acuity hospital-to-home monitoring to low-acuity on-the-go arrhythmia detection, the MoMe[™] ARC Platform will deliver a future suite of virtual telemetry solutions that can be fully configured to any virtual care use case.

InfoBionic is at the heart of virtual cardiac

care. We strive to continuously deliver innovation through the MoMe ARC Platform in order to support all of your virtual telemetry needs in order to support a full range of virtual telemetry in a virtual care world.

Our vision for the MoMe ARC Platform includes:

- Bluetooth® lead sets with Bluetooth® to WiFi bridge
- Support for patient tutorials and symptom inputs
- Integrated battery with convenient wireless charging
- Highly durable and water resistant
- Device agnostic RPM device integration

Advanced

Our flexible lead configurations will enable us to support a full range of data acuity, including the most advanced cardiac monitoring use cases.

Remote

With the ability to uphold full disclosure data continuity from Bluetooth® to WiFi, our goal is to provide high-fidelity insights to care providers in near real-time, eliminating the barriers between you and your patient's data.

What's in a Name?

Cardiology

As the gold standard in cardiac arrhythmia detection, we are focused on monitoring from the hospital to anywhere virtual care is delivered without missing a beat.

Access patient data through our future suite of secure, HIPAA compliant solutions for quality, alerting, reporting, and more.

Hospital-to-Home

Our vision is to support continuous monitoring in real-time for hospital-to-home scenarios, with a Bluetooth® to WiFi bridge that ensures complete data continuity with no compromises.

Advanced Connective Devices

Using an advanced connective services lead set, clinicians will be able to tailor different lead configurations to the required levels of patient acuity and data specificity—from complex diagnostic monitoring to proactive, preventative care.

Modular Wireless Sensors

Our modular and scalable wireless sensors will provide the ultimate convenience and quality, securely transmitting high fidelity cardiac arrhythmia detection data to clinicians in near real-time.

Cloud-Based Solutions

Our suite of cloud-based, HIPAA-compliant solutions will enable healthcare providers to securely access and interpret patient data with capabilities for AI-assisted analysis, quality control, alerting, reporting, and more.

Note: Certain future MoMe™ products are not cleared by the FDA for sale in the U.S.

We'll Meet You Where You Are.

We pride ourselves on meeting our clients where they are, whether you're an independent practice or a hospital system, brick and mortar or fully virtual, and fee-based or value-based.

Independent Practice → Hospital System

We offer powerful opportunities for cost reduction and revenue growth, whether you're an independent practice or a large, multi-site hospital system.

Fully Brick & Mortar → Fully Virtual

Our remote cardiac monitoring solutions provide high fidelity insights to inform in-person visits and rich, continuous monitoring for fully virtual care models.

Fee-Based Model → Value-Based Model

In addition to enabling reimbursements in fee-based models, our platform also prepares providers for the value-based reimbursement models that are beginning to take shape.
